Currently installed hardware	again start a measurement or training to
Re-detect connected hardware	check if the registration process was
1110013-05290302 Software key for connected hardware is available I	successful.

## Delete registration for old unit

If the new unit was a replacement for the old unit and you'll only work with the new one, the old registration can be deleted:

- Select the line with the old unit/key in the "Available Registrations" list.
- Press "Remove registration" button.
- Press "OK"

You cannot remove the only registration, as it would leave your software without valid license!

If you are still not successful with the registration, contact us under: <u>support@scienceandmotion.com</u>
